

## Distributed Generation (DG) Wholesale Rate:

Members of Medina EC who build distributed generation (DG) are able to sell excess power back to the cooperative at the most current rate specified below. This rate varies from month to month and is calculated by dividing Medina EC's prior 12 months' total wholesale power cost (excluding demand cost, transmission costs, Electric Reliability Council of Texas [ERCOT] and related fees, and distribution costs) by the prior 12 months' total kilowatt hours (kWh) purchased.
